

Good housekeeping after RECP awareness training

Location: SK Engineering Industries, Nepal

Process: Fabrication

Before

- Workplace was disorganized with raw material and products placed haphazardly on the shop floor
- This resulted in accidents leading to reduction in productivity

After

- Resource Efficient Cleaner Production (RECP) training was conducted for the shop floor workers, which created awareness on the importance of good housekeeping in the workplace
- After the training, the workers started keeping the workplace neat and tidy, putting the materials in their proper place - this helped reducing the number of accidents

Costs/benefits

Cost: Nil

Benefits: Enhancement of productivity; reduction in accidents
